

# HOW NET METERING WORKS

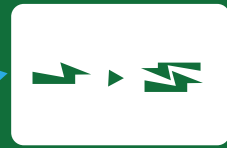

## 1. Home Generator

Electricity is created through wind, solar, or another approved form of home generation.

## 2. Inverter

An inverter transforms DC electricity to AC for home use

## 3. Home

Energy is used at the home

## 4. Meter

A two-directional meter records both power use and power added into the grid

## 5. Power Grid

Excess energy created at home is fed into the grid and meter is credited
